Section I

Getting Started

This section provides an overview of the Wallys AP Controller software and describes the initial steps required to start using the service.

Wallys AP Controller Login

The Wallys AP Controller is a hardware-based network solution tailored for efficiently configuring multiple access points through a web browser interface. With its robust scalability, it supports the management of unlimited networks and devices.

By integrating network management and wireless controller functionalities, it allows Wallystech access points (APs) to seamlessly connect and operate as a unified network.

The following devices are supported by Wallys AP Controller:

Wallys APs: DR5018, DR5018S, DR6018, DR6018S, DR6018C

Wallys AP Controller Login

From a web browser, go to **192.168.1.1** to login. Default User Name:admin Default Password:123456

Chapter 2 | Configuration

Upgrading Device Firmware

Viewing Device Information

Click a device name link in the Name column to access the detailed device information.

Upgrading Device Firmware

Click the upgrade icon in the FW column when new firmware is available for a device.

Note:checkv the box "save configuration" IF need to keep the configuration remain.

Chapter 2 | Configuration
